Indiana Limestone is a naturally occurring substance, generally gray or buff in color with no distinct odor or taste.
This product is a naturally occurring substance that is not classified as a hazard as a solid. Dust created during cutting or
fabricating can incur mild skin, eye or respiratory tract irritation hazards.
Indiana Limestone dust is considered a nuisance dust.
Laboratory tests using the NIOSH 7500 Analytical Method determined Crystalline Silica was Non Detect for this product.
This product is not classified as a carcinogen.
Eye Contact: May produce mild or moderate irritation or inflammation.
Skin Contact: Direct contact may cause mild skin irritation due to abrasion or drying effects.
Inhalation: Inhaled dust may cause respiratory irritation.
